International Marketing Management Mario Glowik 2012-09-18 This book takes as its perspective that the customer undoubtedly is positioned in the center of the firm's overall management activities. True understanding of the customer requires efficient marketing research about the firm's international business environment. As discussed in the first chapters of the book, the firm's business success depends in part on its ethical standards; thus awareness of its environmental and social responsibility is required. The following chapters concentrate on various aspects of culturally biased customer behavior and how the firm ensures sensitivity when planning and selecting its marketing strategies. The most efficient techniques of international market segmentation, targeting, and strategic competitive positioning are introduced. Furthermore, concepts of consumer loyalty programs and their implementation in diversified international markets are presented. An important part is dedicated to describing suitable mixes of marketing policies for firms operating in culturally heterogeneous international markets. Finally, forecasting changes in consumer behavior as a tool of planning international marketing activities is taken into consideration. Marketing control mechanisms that seek to increase efficiency of selected marketing activities further contribute to the valuable insights of this publication.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
